

IMCAR

With over 60 years of experience behind, IMCAR boasts the record of being one of the most long-lived Italian companies still operating in the sector of forming machines for plate and steel structural works. Since 1955 we design, manufacture, build and deliver machines and technological solutions all over the world.

IMCAR was established in Milan, Italy and quickly gained a reputation on the national and international market as a company that is specialised in the manufacture of leading edge plate bending roll technology. IMCAR today occupies a 6500 square meter manufacturing facility and is the worldwide leader in the production of Vertical technologies for tank production industry operating worldwide.

The Company philosophy is customer oriented, offering a wide, serious, and reliable service of consultancy and assistance. This approach has allowed the constant adaptation to the ever-changing market dynamics. This is the reason why the design and manufacture of IMCAR products are still completely made in Italy with care in the selection of the materials and components from the best brands, assuring the high quality of its machines, which characterizes the long life of IMCAR products.

After several years of experience in Horizontal and Vertical machines fed by sheet and coil for production of tanks of small and medium sizes, IMCAR has designed and produced an innovative technology to manufacture medium and large size tanks in vertical suitable for a wide range of industrial applications: petroleum, pharmaceutical, wine, water, beer, fruit juices, chemical products, liquid gases, etc

This Technology, constituted by independent stations or full integrated turnkey solutions devoted to achieve high level quality of manufacture, offer to the customers the best methods related to efficacy and efficiency. Workshop production or field application include independent tank lifting system.

Several accessories machines can be added to complete the production of full tanks: dishing press machine and manipulator for bottoms of small and medium thicknesses, shearing and flanging machine, manipulator for bottom cleaning, forming legs machine and semi-automatic and automatic forming and welding half pipe cooling system.

Also these latest items reflect our purpose to propose Solutions that we study, project and manufacture for our customers Satisfactions.
